## Wiedemann-Franz Law - Solution

Part A: Electrical conductivity of metals (1.5 points)
A. 1 (1.0 points)

Magnet descend time:

| Number | Copper [s] | Aluminum $[\mathrm{s}]$ | Brass [s] |
| :---: | :---: | :---: | :---: |
| 1 | 17.77 | 9.23 | 6.1 |
| 2 | 17.96 | 9.39 | 5.83 |
| 3 | 18.16 | 9.22 | 6.04 |
| 4 | 18.15 | 9.37 | 5.86 |
| 5 | 17.76 | 9.36 | 6.16 |
| 6 | 18.2 | 9.44 | 5.92 |
| 7 | 17.67 | 9.65 | 5.9 |
| 8 | 17.9 | 9.18 | 6.08 |
| 9 | 17.67 | 9.41 | 5.86 |
| 10 | 18.36 | 8.96 | 5.99 |
|  |  |  |  |
| Average | 17.96 | 9.32 | 5.97 |

A. 2 (0.5 points)

|  | Copper | Aluminum | Brass |
| :---: | :---: | :---: | :---: |
| Electrical conductivity $\left[\frac{1}{\Omega m}\right]$ | $5.97 \times 10^{7}$ | $2.98 \times 10^{7}$ | $1.60 \times 10^{7}$ |

Part B: Thermal conductivity of copper (3.0 points)

| B. 1 (0.1 points) <br> Rod 1 temperature : $\mathbf{2 2 . 7 6}[\mathrm{C}]$ |  |  |  |  |  |  |  |  |

| 1050 | 27.16 | 28.16 | 29.17 | 30.20 | 31.240 | 32.30 | 33.38 | 34.48 |
| 1200 | 27.29 | 28.30 | 29.33 | 30.37 | 31.42 | 32.49 | 33.58 | 34.68 |
| B. 5 (1.0 | ints) <br>  |  | $0.05$ | $?$ <br> 0.1 <br> osition | $\begin{aligned} & \text { • } \mathrm{T} \\ & -\mathrm{T} \\ & -\mathrm{T} \\ & - \end{aligned}$ <br> 0.1 ] | 5.0 min <br> 7.5 min <br> 0.0 min <br> Coses) | . 2 |  |

B. 6 (0.5 points)

$$
\begin{aligned}
& \kappa_{0}=-\frac{P}{A \frac{\Delta T}{\Delta x}}=-\frac{5.51[\mathrm{~W}]}{\pi \cdot\left(10^{-2}[\mathrm{~m}]\right)^{2} \cdot\left(-41.8\left[\frac{\mathrm{~K}}{\mathrm{~m}}\right]\right)}=420\left[\frac{\mathrm{~W}}{\mathrm{mK}}\right] \\
& \frac{\Delta T}{\Delta t}=\frac{31.04[\mathrm{C}]-30.62[\mathrm{C}]}{5 \cdot 60[\mathrm{~s}]}=1.4 \cdot 10^{-3}\left[\frac{\mathrm{~K}}{\mathrm{~s}}\right]
\end{aligned}
$$

B. 7 (0.3 points)

## higher value

We expect a higher value of $\kappa_{0}$ compared with the real $\kappa_{c u}$ because of 2 reasons:

1. A part of the supplied heat power is lost through the side walls. Therefore, the heat transfer through the cross-section of the rod is smaller.
2. Since the system is not in a steady state ( $\frac{\Delta T}{\Delta t} \neq 0$ ), the corresponding power involved should be subtracted from the power supplied by the heater.

## Part C: Heat loss and heat capacity of copper (4.0 points)

C. 1 (1.0 points)

| Time $[s]$ | $T_{1}[C]$ | $T_{2}[C]$ | $T_{3}[C]$ | $T_{4}[C]$ | $T_{5}[C]$ | $T_{6}[C]$ | $T_{7}[C]$ | $T_{8}[C]$ | $T_{a v}[C]$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 20 |  |  |  | 30.67 | 30.67 |  |  |  | 30.67 |

## C. 2 (1.0 points) <br> 

## C. 3 (1.0 points)

The purpose of this part is to correct to first order the result in part B. Hence, every solution within $10 \%$ accuracy is accepted (see marking scheme).

Solution 1 (using slopes):
$P_{\text {loss }}=\left.c_{p} \cdot m \cdot \frac{\partial T_{a v}}{\partial t}\right|_{\text {Cooling }}$
$P_{i n}=c_{p} \cdot m \cdot\left(\left.\frac{\partial T_{a v}}{\partial t}\right|_{\text {Heating }}-\left.\frac{\partial T_{a v}}{\partial t}\right|_{\text {cooling }}\right)$
Where $\left.\frac{\partial T_{a v}}{\partial t}\right|_{\text {Cooling }}$ is the average of both cooling slopes.

$$
c_{p} \cdot m=\frac{5.5[W]}{\left(2.27 \cdot 10^{-2}\left[\frac{K}{s}\right]+1.6 \cdot 10^{-3}\left[\frac{K}{s}\right]\right)}
$$

Solution 2 (using jump):

$$
\begin{aligned}
& P_{\text {loss }}=\left.c_{p} \cdot m \cdot \frac{\partial T_{a v}}{\partial t}\right|_{\text {Cooling }} \\
& P_{i n} \cdot \Delta t=c_{p} \cdot m \cdot \Delta T
\end{aligned}
$$

Where $\left.\frac{\partial T_{a v}}{\partial t}\right|_{\text {Cooling }}$ is the average of the two cooling slopes, and $\Delta T$ is the extrapolated jump in temperature half way though the heating time interval.
$c_{p} \cdot m=\frac{P_{i n} \cdot \Delta t}{\Delta T}=\frac{5.5[\mathrm{~W}] \cdot 120[\mathrm{~s}]}{2.94[\mathrm{~K}]}=224\left[\frac{\mathrm{~J}}{\mathrm{~K}}\right]$

$$
\begin{array}{l|l}
\hline c_{p} \cdot m=226\left[\frac{J}{K}\right] \Rightarrow c_{p}=390\left[\frac{\mathrm{~J}}{\mathrm{~kg} \cdot \mathrm{~K}}\right] & c_{p}=386\left[\frac{\mathrm{~J}}{\mathrm{~kg} \cdot \mathrm{~K}}\right] \text { which is the correct } \\
\text { Which is } 1 \% \text { off the correct value. } & \text { value. } \\
P_{\text {loss }}=226\left[\frac{\mathrm{~J}}{K}\right] \cdot 1.4 \cdot 10^{-3}\left[\frac{K}{s}\right]=0.32[\mathrm{~W}] & P_{\text {loss }}=224\left[\frac{\mathrm{~J}}{\mathrm{~K}}\right] \cdot 1.4 \cdot 10^{-3}\left[\frac{\mathrm{~K}}{\mathrm{~s}}\right]=0.31[\mathrm{~W}]
\end{array}
$$

C. 4 (1.0 points)

The temperature gradient is proportional to the local heat flow.

To first order, the average temperature gradient will be proportional to the average heat flow. Therefore, the temperature gradient will be proportional to $P_{i n}-\frac{1}{2} P_{\text {losses }}$ :

$$
\begin{aligned}
& \kappa=\frac{P_{\text {in }}-\frac{1}{2} P_{\text {absorb } b}-\frac{1}{2} P_{\text {loss }}}{A \cdot(\Delta T / \Delta x)}=\frac{P_{\text {in }}-\frac{1}{2} c_{p} \cdot m \cdot \frac{\Delta T}{\Delta t}-\frac{1}{2} \dot{Q}_{\text {loss }}}{A \cdot \Delta T / \Delta x}=\kappa_{0} \cdot \frac{P_{\text {in }}-\frac{1}{2} c_{p} \cdot m \cdot \frac{\Delta T}{\Delta t}-\frac{1}{2} \dot{Q}_{\text {loss }}}{P} \\
& \kappa=420\left[\frac{W}{m K}\right] \cdot \frac{5.51[W]-\frac{1}{2} \cdot 226\left[\frac{\mathrm{~J}}{\mathrm{~K}}\right] \cdot 1.4 \cdot 10^{-3}\left[\frac{K}{\mathrm{~s}}\right]-\frac{1}{2} \cdot 0.32[\mathrm{~W}]}{5.51[\mathrm{~W}]}=396\left[\frac{\mathrm{~W}}{\mathrm{mK}}\right]
\end{aligned}
$$

Which gives an error of $2.5 \%$ error compared to expected $385\left[\frac{W}{m K}\right]$. We expect a $1 \%$ systematic error (see appendix).

Part D: Thermal conductivity of multiple metals (1.0 points)
D. 1 (0.1 points)

$$
T=22.65[C]
$$

D. 2 (0.2 points)

Time of measurement: $1041[s]$

| $T_{1}[C]$ | $T_{2}[C]$ | $T_{3}[C]$ | $T_{4}[C]$ | $T_{5}[C]$ | $T_{6}[C]$ | $T_{7}[C]$ | $T_{8}[C]$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 41.68 | 40.51 | 38.51 | 34.65 | 32.47 | 30.71 | 29.63 | 28.62 |

## Wiedemann-Franz Law - Marking Scheme

## Part A: Electric conductivity of metals (1.5 points)

| A.1 | Measuring magnet fall (1.0 pts) |  |
| :--- | :--- | :--- |
|  | The number of total measurements : if $N \leq 15$ | 0.2 pts |
|  | if $15<N \leq 21$ | 0.5 pts |
|  | if $N>21$ | 0.7 pts |
|  | Average travel time within $10 \%$ of solution for 2 out of 3 rods | 0.3 pts |
| A.2 | Calculation of conductivity (0.5 pts) |  |
|  | Correct calculation of conductivity from A1 | 0.1 pts |
|  | Final result for 2 out of 3 values: Within $10 \%$ of correct value | 0.4 pts |
|  | Within $20 \%$ of correct value | 0.2 pts |

## Part B: Thermal conductivity of copper (3.0 points)

| B.1 | Writing room temperature with units | 0.1 pts |
| :--- | :--- | :--- |
| B.2 | Design a 4-probe circuit (0.5 pts) |  |
|  | Drawing ammeter in series with source and heater | 0.2 pts |
|  | Measuring voltage on heater and not power source | 0.3 pts |
| B.3 | Writing the equation for power and proper calculation | 0.1 pts |
| B.4 | Writing thermometers readings (0.5 pts) |  |
|  | Complete set (24 temperatures in table) | 0.2 pts |
|  | Units | 0.1 pts |
|  | 2 digits after decimal point | 0.1 pts |
|  | Times within 1 minute of requirement (15,17.5,20 minutes) | 0.1 pts |
| B.5 | Thermal equilibrium graph (1.0 pts) |  |
|  | All 24 points are plotted | 0.4 pts |
|  | Correct axes, with units | 0.2 pts |

## Experiment IPhO 2019

|  | Points span on 1/2 the area of graph paper | 0.2 pts |
| :---: | :---: | :---: |
|  | Slope is sketched for 17.5 min | 0.2 pts |
| B. 6 | Obtaining $\kappa_{0}$ ( 0.5 points) |  |
|  | Correct expression for $\kappa_{0}$ | 0.1 pts |
| Op. 1 | Range of $\kappa_{0}[W /(m K)]: 404 \leq \kappa_{0} \leq 446$ | 0.2 pts |
|  | $382 \leq \kappa_{0} \leq 468$ | 0.1 pts |
|  | Range of $\Delta T / \Delta t[K / s]: 1.25 \cdot 10^{-3} \leq \Delta T / \Delta t \leq 1.55 \cdot 10^{-3}$ | 0.2 pts |
|  | $1.1 \cdot 10^{-3} \leq \Delta T / \Delta t \leq 1.7 \cdot 10^{-3}$ | 0.1 pts |
| Op. 2 | The value of the corrected $\kappa$ (using the method in the solution) with $\kappa_{0}, \Delta T / \Delta t$ and $c_{p}, P_{\text {loss }}$ from the official solution is in range: |  |
|  | $376 \leq \kappa \leq 416$ | 0.4 |
|  | $356<\kappa<376$ or $416<\kappa<436$ | 0.2 |
| B. 7 | Correct answer - Higher value | 0.3 pts |

## Part C: Heat loss and heat capacity of copper ( 4.0 points)

| C.1 | Cooling-Heating-Cooling cycle (1.0 pts) |  |
| :--- | :--- | :--- |
|  | Number of measurement points for each step: if $3 \leq N<5$ | 0.1 pts |
|  | if $N \geq 5$ | 0.2 pts |
|  | Heating step time in range $1[\mathrm{~min}] \leq t \leq 3[\mathrm{~min}]$ | 0.2 pts |
|  | Cooling steps time $t>200[s]$ | 0.2 pts |
|  | If average between T4,T5 or average over all thermometers | 0.2 pts |
|  | Used only T4 or only T5 | 0.1 pts |
|  | The reported temperature mid-heating is: |  |
|  | Less than 2.5 [C] away from average temperature in B.4 | 0.2 pts |
|  | Between 2.5[C] and 4.0[C] from average temperature in B.4 | 0.1 pts |

## Experiment IPhO 2019

| C. 2 | Cooling - Heating - Cooling graph (1.0 pts) |  |
| :---: | :---: | :---: |
|  | Correct axes, units on axes | 0.2 pts |
|  | Number of points on graph: $N \geq 15$ | 0.4 pts |
|  | $12 \leq N<15$ | 0.2 pts |
|  | Points span on 1/2 the area of graph paper | 0.2 pts |
|  | Slope lines are plotted for cooling steps | 0.2 pts |
| C. 3 | Obtaining $c_{p}$ and $P_{\text {loss }}(1.0 \mathrm{pts})$ |  |
|  | $P_{\text {loss }}=\left.c_{p} \cdot m \cdot \frac{\partial T_{a v}}{\partial t}\right\|_{\text {Cooling }}$ | 0.2 pts |
|  | $P_{i n}=c_{p} \cdot m \cdot\left(\left.\frac{\partial T_{a v}}{\partial t}\right\|_{\text {Heating }}-\left.\frac{\partial T_{a v}}{\partial t}\right\|_{\text {Cooling }}\right)$ or $P_{i n} \cdot \Delta t=c_{p} \cdot m \cdot \Delta T$ | 0.4 pts |
|  | Range of $c_{p}$ in $[J /(k g \cdot K)]: 425 \leq c_{p} \leq 350$ | 0.2 pts |
|  | $465 \leq c_{p} \leq 310$ | 0.1 pts |
|  | Range of $P_{\text {loss }}$ in [W] : $0.25 \leq P_{\text {loss }} \leq 0.38$ | 0.2 pts |
|  | $0.19 \leq P_{\text {loss }} \leq 0.44$ | 0.1 pts |
| C. 4 | Correct $\kappa(1.0 \mathrm{pts})$ |  |
|  | $c_{p} \cdot m \cdot \frac{\Delta T}{\Delta t}$ | 0.1 pts |
|  | $c_{p} \cdot m \cdot \frac{\Delta T}{\Delta t}$ and $P_{\text {loss }}$ are treated the same way | 0.1 pts |
|  | Form of equation $\kappa=\frac{\kappa_{0}}{P}\left(P-\alpha \cdot\left(c_{p} \cdot m \cdot \frac{\Delta T}{\Delta t}+P_{\text {loss }}\right)\right)$ | 0.2 pts |
|  | Writing that $\alpha=0.5$ | 0.3 pts |
|  | $\kappa$ range in $[W /(m K)]: 376 \leq \kappa \leq 416$ | 0.3 pts |
|  | $356<\kappa<376$ or $416<\kappa<436$ | 0.2 pts |
